

AGCIH Agentic AI Governance Readiness Checklist (Zimbabwe Edition)

Public 1■Pager — Minimum Viable Controls for Agentic AI Systems

Version: v1.0 • Date: January 2026

Purpose

Agentic AI systems can take actions, interact with tools, and change state in other systems. This checklist helps ministries identify minimum controls before any pilot or procurement.

Readiness Checklist (Yes/No)

Control Area	Minimum Question
Use Case Risk	Is the use case high-impact (eligibility, justice, essential services) or child-sensitive?
Action-Space Limits	Are the agent’s permitted actions explicitly defined and bounded?
Approval Checkpoints	Are human approval steps required for high-impact actions?
Identity & Access	Does the agent have scoped permissions (least privilege) and a unique identity?
Logging & Monitoring	Are tool calls, actions, and access logs enabled and reviewable?
Incident Response	Is there an escalation pathway and kill switch/pause authority?
Vendor Obligations	Are vendor commitments documented for auditability, support, and termination?

Decision Rule

If any item is **No**, the system should not proceed beyond controlled testing until controls are implemented.
